The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harada et al., JP 2001-172274, the English translation, in view of Hudson, Jr. et al both cited by applicants. The former discloses the production of 4-acetyltetrahydropyran by reacting 4-acetyl-4-alkoxycarbonyltetrahydropyran with hydrogen peroxide in the presence of a base.

The instant process is the same as above but uses an acid to effect the above conversion.

However the decarboxylation of beta-keto-esters to the corresponding methyl ketone using mineral acids such as sulfuric or hydrochloric acid at elevated temperatures is a standard procedure in organic chemistry. See Hudson, Jr. et al Table I.

Thus it would have been obvious for one of ordinary skill in the art to substitute a mineral acid for the conditions used by Harada et al.
